Basic System Design

UI Design

- shown in the basic ui design

UI Demo

- Shown in <https://youtu.be/Ahr8YTBzYEK>

Questions and Considerations

- I am not sure how the system may guarantee the students who received the investment will hold the value? What are the guarantee for that?
- As a investment platform, I am wondering whether there are some certifications or licenses to be issued before it comes to Market? At the least to say, the licences within China is so hard to obtain, which may takes half a year.
- Frankly speaking, the human ability system is so complex a system, which is hard to model(There are so many theories in modelling this system, and it is hard to choose one that is universal). It is better to model using the university admission or job offers obtained as a comprehensive indicator for students ability modeling.
